

IN THE "NOT SO IDEAL" REAL WORLD HAY CONDITIONS

- **WHEN THE HIRED MAN GUESSES WRONG ON HOW DRY THE HAY WAS.**
- **WHEN COOL DAMP WEATHER KEEPS YOU FROM GETTING THE HAY OFF SO YOU CAN TURN THE IRRIGATION SYSTEM BACK ON.**
- **WHEN THERE JUST ISN'T TIME TO WAIT BECAUSE THERE ARE A THOUSAND OTHER THINGS THAT NEED DONE.**
- **WHATEVER THE REASON, THAT HAY GOT BALED AT 20% MOISTURE.**

NOW WHAT ARE YOUR CHOICES

YOU CAN CHOOSE THE ADDED EXPENSE OF CHEMICALS (DRYING AGENTS) AND PUT IT IN THE BARN HOPING THEY WORK AND THEY WERE APPLIED CORRECTLY TO PREVENT A FIRE. YOU COULD CHOOSE TO DO THE SAME THING BUT STACK IT OUTSIDE AND TARP IT.

OR

YOU CAN CHOOSE THE STINGER CUBE-LINE 4000 BALE WRAPPER AND KNOW THAT IF YOU WRAP THE LINE AIR TIGHT, THOSE BALES WILL COME OUT OF THAT LINE 1 MONTH OR 6 MONTHS LATER WITH NO WEIGHT OR QUALITY LOSS AND MUCH LESS VISUAL CHANGE THAN A TARPED STACK WITH NO RISK OF FIRE OR DAMAGED HAY AND NO EXPENSIVE CHEMICALS

THE STINGER CUBE-LINE 4000 BALE WRAPPER IS LIKE A PORTABLE HAY SHED~

ONLY IT COSTS LESS AND WITH THE STINGER CUBE-LINE 4000 BALE WRAPPER

YOU HAVE CHOICES
